Weather Key Points

Regional Operations Center

Western Region

Saturday, July 23

- Slightly cooler temperatures are expected today, with another warming trend beginning Sunday and continuing through much of next week
 - Moderate to locally high heat risk impacts will return for many inland areas during this time, with readings exceeding 100 degrees possible across the far northern California valleys for mid to late week
- Breezy winds most afternoons will also maintain elevated fire weather conditions for many inland mountain and foothill locations and the southern deserts through late next week
 - Widespread critical fire weather conditions are not currently expected
- Monsoon moisture will bring an increase in scattered showers and thunderstorms across the southern deserts and mountains beginning Sunday and persisting through late week. Some scattered storms are also forecast over the Sierra by mid and late week.
 - As is typical, some storms may bring locally strong winds and areas of blowing dust across the deserts
 - Locally heavy rainfall associated with thunderstorms is also possible Sunday and Monday across southeast California. At this time, widespread flooding or burn scar impacts are not expected, though localized flash flooding can't be ruled out.
